

Concept Note

Section 1: Overview of response									
Project Title	Relief assistance for people in Central Sulawesi affected by the earthquake and tsunami through fulfilment of basic needs and basic rights								
Location	Palu, Donggala and Sigi District, Central Sulawesi, Indonesia								
Project start date	1 October 2018								
Duration of project	12 (months)								
Budget (USD)	3.000.090 (USD)								
Sector(s)	⊠ Shelter / □ Food Security NFIs								
	⊠ Health / ⊠ Protection/Psychosocial Nutrition								
	🖾 WASH 🖾 Education								
	 Early Unconditional Cash recovery / Livelihoods 								
	Other sector Emergency preparedness and camp management								
Forum	ACT Indonesia Forum								
Requesting members	 Church World Service (CWS) PELKESI/ICAHS (Indonesian Christian Association for Health Services) YAKKUM Emergency Unit (YEU) 								
Local partners	Local churches and local interfaith communities								
Impact (overall objective)	To fulfil basic need and basic right people in Palu, Donggala and Sigi, District affected by the earthquake and tsunami through fulfilment of basic needs and basic rights.								
Target beneficiaries	100,000 affected communities in Palu, Donggala and Sigi District, Central Sulawesi. Among of them are vulnerable groups i.e. children under five, pregnant women, nursing women, elderly and people living with disabilities.								
Expected outcomes	 A.1 Improved community's capacity in safe, healthy and inclusive housing construction to rebuilt their houses properly A.2 Transitional shelters for target households meeting Sphere standards constructed B. Increased access of affected person to safe water and sanitation facilities and practices hygiene promotion that meet Sphere Standards 								
	C.1 Health and hygiene of the affected communities are monitored and well maintained								
	 C.1.1 Medical intervention for patients including post injured patients. C.1.2 The quality improvement of the community health by reducing the number of the primary diseases found in the location, controlling the potential of outbreak in the IDP's camps and health 								

 A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community working Group (Pokja) is established in each village B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C.1.2 a. The elimination of the primary disease's causatives factors by 70% b. Infectious patients are quarantined to prevent an outbreak c. Management of reproductive health for women and adolescents d. Providing information on health and disease prevention 		
C.1.4 The recovery of Local community health system C.1.5 The improvement of local capacity through health-based disaster risk reduction. C.2 People with disabilities are empowered and supported by their family and communities to be able to function well in their daily activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community wave access of safe water and sanitation facilities B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital		
C.1.5 The improvement of local capacity through health-based disaster risk reduction. C.2 People with disabilities are empowered and supported by their family and communities to be able to function well in their daily activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected hourshold are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High ris		
 risk reduction. C.2 People with disabilities are empowered and supported by their family and communities to be able to function well in their daily activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community have access of safe water and sanitation facilities B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C.1.2 The elimination of the primary disease's causatives factors by 70% b. Inferctious patients are quarantined to prevent an outbreak c. Management of reproductive health for women and adolescents d. Providing information on health and disease prevention C.1.3 		
 C.2 People with disabilities are empowered and supported by their family and communities to be able to function well in their daily activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C.1.2 		
family and communities to be able to function well in their daily activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community working Group (Pokja) is established in each village B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C.1.2 a. The elimination of the primary disease's causatives factors by 70% b. Infectious patients are quarantined to prevent an outbreak c. Management of reproductive health		
activity. D. Affected communities regained a sense of normalcy, stability and hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community working Group (Pokja) is established in each village B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C.1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C.1.2 a. The elimination of the primary disease's causatives factors by 70% b. Infectious patients are quarantined to prevent an outbreak c. Management of reproductive health for women and adolescents		C.2 People with disabilities are empowered and supported by their
hope through psychosocial interventions. E. Strengthened local livelihood alternatives that support post-disaster situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community have access of safe water and sanitation facilities B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C1.12 a. The elimination of the primary disease's causatives factors by 70% b. Infectious patients are quarantimed to prevent an outbreak c. Management of reproductive health for women and adolescents d. Providing information on health and disease prevention		
situation F. Increased awareness of the affected communities in disaster preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community have access of safe water and sanitation facilities B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment C1.1 a. The spread of diseases including infection among injured patients are prevented by 70% b. High risk disease patients can be referred to the health facilities, patients who need advanced treatment, and cannot be served only with a mobile clinic, will be referred to the hospital C1.12 a. The elimination of the primary disease's causatives factors by 70% b. Infectious patients are quarantined to prevent an outbreak c. Management of reproductive health for women and adolescents d. Providing information on health and disease prevention		
preparedness G.1 Increased knowledge and skills of staff and partners on programmatic, administrative, financial and logistical issues G.2 Improved quality of program implementation capacity Expected outputs A.1 Community knows the basic principles and technique in construction using approved building codes and standards A.2 Affected household are able to cope with basic needs on temporary shelter need during emergency situation A.3 Community working Group (Pokja) is established in each village B.1. c. Management of reproductive health for women and adolescentsd. Providing information on health and disease preventionC.1.3		
d. Providing information on health and disease prevention C.1.3		
		C.1.3
a. Minimal physical rehabilitation of Woodward & Samaritan Hospital to		

	ensure patient safety, retrofitting hospital building so the building is safe
	to operate serving patients
	b. Essential hospital equipment are functional
	c. Availability of essential medicines fulfilled
	d. Full operation of Mobile Clinics
	e. The function of IT system to ensure MIS and medical services
	f. Minimal human resource quantity and competence (Temporarily assign
	doctors, nurses and health workers from other hospitals because the existing
	health workers have not been able to work optimally because of the large
	number of patients who need to be treated)
	g. Capacity building to fulfil quality standard for Universal
	access partnership soon after recovery , increased capacity of hospitals to
	deal with future disasters (establish hospital plan and system).
	b. Outwork convice and DUC to enhance Uselth DDD in their established
	h. Outreach service and PHC to enhance Health DRR in their catchment
	areas
	C.1.4
	a. The recovery of healthcare system in community health centre
	 b. The recovery of healthcare system in integrated health centre in village
	c. Supplementary feeding for vulnerable groups (children under five,
	pregnant women, nursing women and elderly
	pregnant women, nursing women and elderly
	C.1.5. The local capacity of the village's health cadres and church are
	Strengthened
	ou cligatetteu
	C. 2.1 People with disability have improved knowledge about their
	health and actively participate to achieve good health
	C.2.2 Family and community member have increase awareness about
	disability
	C.2.3 Physical barrier for with disability is reduced
	D.1 Social safety net (family and community members) are trained on
	psychosocial care and support
	D.2 Children have safe space and protected environment to develop,
	learn, play and build resilience after emergency
	D.3. Community social-protection mechanism is in place
	E. Training/Workshop on livelihood for affected population
	F.1 Community based disaster preparedness system is in place
	F.2 Community have the capacity in preparedness and disaster
	response
	G. Training conducted for staff and partner to improve program quality
Expected outputs	
	A.1 Community knows the basic principles and technique in
	construction using the building codes and standard
	A.2 Affected household are able to cope with basic needs on temporary

 r
shelter need during emergency situation
A.3 Community working Group (Pokja) is established in each hamlet
 B.1. Community have access of safe water and sanitation facilities B.2. Improves awareness raising on hygiene promotion and healthy environment
 C.1.1 a. The spreading of diseases including infectious, and injured patients are prevented by 70%
b. High risk disease patients can be referred to the health facilities
C.1.2
a. The elimination of the primary disease's causatives factors by 70%
b. Infectious patients are quarantined to prevent an outbreak
c. Management of health reproduction for women and adolescent
d. Applying information about health promotion
C.1.3
a. Physical rehabilitation of Woodward & Samaritan Hospital to ensure patient safety
b. The function of essential health equipment recovered
c. Availability of essential medicine fulfilled
d. Full operation of Mobile Clinics e. The function of IT system to ensure MIS and medical services
 f. Minimal human resource quantity and competence (deploying from other member or unit)
g. Capacity building to fulfil minimal quality standard for Universal access partnership soon after recovery
h. Outreach service and PHC to enhance Health DRR in their catchment areas
C.1.4 a. The recovery of healthcare system in community health centre
b. The recovery of healthcare system in integrated health centre in village
c. Supplementary feeding for vulnerable groups (children under five, pregnant women, nursing women and elderly
C.1.5.The local capacity of the village's health cadres and church are Strengthen
C. 2.1 People with disability have improved knowledge about their health and actively participate to achieve good health
C.2.2 Family and community member have increase awareness about disability
C.2.3 Physical barrier for with disability is reduced
D.1 Social safety net (family and community members) are trained on

	psychosocial care and support
	D.2 Children have safe space and protected environment to develop,
	learn, play and build resilience after emergency
	D.3. Community social-protection mechanism is in place
	E. Training/Workshop on livelihood for affected population
	F.1 Community based disaster preparedness system is in place
	F.2 Community have the capacity in preparedness and disaster
	response
	G. Training conducted for staff and partner to improve program quality
Main activities	
	A.1 Distribution emergency shelter kit (tarpaulins, blankets, matrasses, etc)
	A.2 Distribution of emergency shelter tool kits
	A.3 Earthquake-resistant construction training and info-session for community
	members (representatives of target households or local craftsmen)
	A. 4 Awareness raising on healthy house through dissemination of
	brochure/poster on healthy house.
	A.5 Provide transitional shelters for most-affected households and people
	with disability
	B.1 Distribution of water supply (water bladders, jerry cans) to distribution
	points
	B.2 Well cleaning, repair/build
	B.3 Waste management & disposal in concentrated areas
	B.4 To protect spring water and construct catchment tanks/ gravity-fed
	system
	B.5 to construct semi-permanent communal latrines
	B.6 Capacity building training for mothers, health cadres and other
	stakeholders on water borne diseases and hygiene and sanitation practices
	B.7 hygiene kits are distributed
	C.1.1Mobile Clinic
	1. Medical treatments for patients including post-injured patients.
	2. Mobile clinic and home visit.
	3. Healthcare outreach for susceptible and high-risk diseases groups on the
	found primary diseases.
	C.1.2 Primary Health Care
	1. Healthy living habit promotion for community
	2. Health education for early-age and school-age children.
	3. Health reproduction and waste management for women and adolescent
	4. Feminine kits distribution
	C.1.3 Recovery of Church Health Service
	1. Minimal physical rehabilitation to ensure patient safety
	2. Supporting basic medical equipment
	3. Supporting essential medicine
	4. IT setup (hardware and software)

	 5. Mobile clinics operation 6. Human resource temporary deployment from other health unit (medical doctor, nurse, etc) 7. Capacity building to fulfils minimal quality standard for Universal access partnership soon after recovery 8. Capacity Building for Outreach service and PHC to enhance Health DRR in their catchment areas
	 C.1.4 Local Healthcare system normalization - revitalization of the integrated health centres. 1. Supporting of community health centre activation 2. Assessment on integrated health centre data. 2. Monitoring on routine visitation to integrated health canters (D/S). 4. Supplementary nutrition support. C.1.5 Strengthening of the local capacity on disaster risk reduction in health sector. 1. Emergency first aid training for community
	 Asset-based community development training for health cadres. Training on feeding for infants and children. C.2
	 Physiotherapy for potential disability conditions Provide assisted Device Disability handling training for the community 1 Training on psychosocial care and support
	 D. 2 Session on self-protection and essential information to access basic services D. 3 Facilitating learn and play activities for children
	 E.1. Knowledge and skills training on alternative or improved livelihoods activities. E.2 Provide tools & materials to start livelihood activities for affected households
	F.1 Facilitating the development of disaster preparedness planF.2 Training on emergency preparedness and response skillsG. To provide capacity building training for staff and partners in the areas of program, administration and finance
Main activities	 A.1 Distribution emergency shelter kit (tarpaulins, blankets, matrasses, etc) A.2 Distribution of emergency shelter tool kits A.3 Earthquake-resistant construction training and info-session for community members (representatives of target households or local craftsmen) A. 4 Awareness raising on healthy house through dissemination of brochure/poster on healthy house.

A.5 Provide transitional shelters for most-affected households and people with disability
B.1 Distribution of water supply (water bladders, jerry cans) to distribution
points B.2 Well cleaning, repair/build
B.3 Waste management & disposal in concentrated areas
B.4 To protect spring water and construct catchment tanks/ gravity-fed system
B.5 to construct semi-permanent communal latrines
B.6 Capacity building training for mothers, health cadres and other stakeholders on water borne diseases and hygiene and sanitation practices B.7 hygiene kits are distributed
C.1.1Mobile Clinic
 Medical treatments for patients including post-injured patients. Mobile clinic and home visit.
3. Healthcare outreach for susceptible and high-risk diseases groups on the found primary diseases.
C.1.2 Primary Health Care
1. Healthy living habit promotion for community
2. Health education for early-age and school-age children.
 Health reproduction and waste management for women and adolescent Feminine kits distribution
C.1.3 Recovery of Church Health Service
1. Minimal physical rehabilitation to ensure patient safety
2. Supporting basic medical equipment
 Supporting essential medicine IT setup (hardware and software)
5. Mobile clinics operation
6. Human resource temporary deployment from other health unit (medical doctor, nurse, etc)
7. Capacity building to fulfils minimal quality standard for Universal access partnership soon after recovery
8. Capacity Building for Outreach service and PHC to enhance Health DRR in their catchment areas
C.1.4 Local Healthcare system normalization - revitalization of the integrated health centres.
1. Supporting of community health centre activation
2. Assessment on integrated health canter data.
2. Monitoring on routine visitation to integrated health canters (D/S).
4. Supplementary nutrition support.
C.1.5 Strengthening of the local capacity on disaster risk reduction in health sector.
1. Emergency first aid training for community
2. Asset-based community development training for health cadres.
3. Training on feeding for infants and children.

C.2
1. Physiotherapy for potential disability conditions
2. Provide assisted Device
3. Disability handling training for the community
D. 1 Training on psychosocial care and support
D. 2 Session on self-protection and essential information to access basic services
D. 3 Facilitating learn and play activities for children
E.1. Knowledge and skills training on alternative or improved livelihoods activities.
E.2 Provide tools & materials to start livelihood activities for affected households
F.1 Facilitating the development of disaster preparedness plan
F.2 Training on emergency preparedness and response skills
G. To provide capacity building training for staff and partners in the
areas of program, administration and finance
Section 2: Narrative Summary

Background

An earthquake with a magnitude of 7.4 with the shallow epicentre (10 km) located at 27 km northeast of Donggala occurred at 17:02 WIB (Indonesian Western Time) on 28 September 2018 followed by a tsunami warning by BMKG (Meteorology, Climatology and Geophysics Agency). This earthquake triggered a tsunami that occurred around 17:22 WIB, and BMKG revoked the tsunami warning at 17:38 WIB. There are 2 provinces were directly affected by the earthquake and tsunami: 1. Central Sulawesi Province, there are 4 districts / city; Donggala District, Palu City, Sigi District and Parigi Moutong District; 2. West Sulawesi Province, there is 1 district; North Mamuju District.

Data obtained as of 8 October 2018, at 20:00 WIB, was as follows; 1.948 dead casualties. As many as 74,444 displaced persons are sheltered in 147 evacuation site. The death toll was caused by the rubble of the collapsed building due to the earthquake and there was also a tsunami damaging the coastal areas. In addition, there was also liquefaction phenomenon that submerged houses and buildings in Petobo Village, in Jl. Dewi Sartika - South Palu, in Biromaru village - Sigi, and in Sidera village - Sigi. The Governor of Central Sulawesi, Longki Djanggola, declared the state of emergency of response period for the next 14 days, valid from 28 September 2018 to 11 October 2018. The Governor appointed Commander of Korem (Resort Military Command) of 132 / Tadulako as commander of emergency response to earthquake and tsunami in Central Sulawesi. So the main command post on the ground is directed to Korem 132 / Tadulako.

Humanitarian Needs		Capacity to Respond						
	1. Clean water for consumption, bathing,	PELKESI and YEU were in Palu since September						
	washing and toileting	30, 2018. Previous experience was a joint						
	2. Portable toilets in shelters	response in the Pidie Jaya Earthquake,						
	3. Food supply, especially for babies and elderly							

SECRETARIAT: 150, route de Ferney, P.O. Box 2100, 1211 Geneva 2, Switz. TEL.: +4122 791 6434 – FAX: +4122 791 6506 – www.actalliance.org

4. Non-food items distribution, such as shelter	Nanggroe Aceh Darussalam, December 2016
kits (tarpaulin, mattress, etc.), hygiene kits	and Lombok District Earthquake.
(blanket, toiletries, specific needs for babies,	
under-5, expectant, women, elderly and	CWS and YEU has experienced in large
persons with disability), proper lighting in	emergency response operation in Indonesia, for
shelters, equipment for the clean-up, and	example the Indian Ocean Tsunami 2004,
carpentry utensils for constructing temporary	Yogyakarta earthquake 2006, and West
shelters.	Sumatera earthquake 2009. CWS also has
5. Continue mobile health service	experience working in Central Sulawesi in 2000
6. Psychosocial support for children and adults	to 2013, from emergency respond program to
7. Shelter management to prepare the rainy	development. CWS has its EPRP and local staffs
season	trained in emergency respond to be deployed.
	CWS at the regional has capacity to support
	with our emergency respond roster. Currently
	we have staff on the ground and has started our
	emergency relief operation in water
	distribution.
	Action already taken :
	1. Assessment focused on health, WASH,
	and psychosocial support.
	2. YEU and PELKESI have started health service.
	4. Water distribution
	5. Distributing Non Food item : blanket and
	tarpaulins
	6. Psychosocial support
	·

Proposed response

Does the proposed response honour ACT's commitment to Child \boxtimes Yes \Box No Safeguarding?

In collaboration with relevant stakeholders, YEU have identified a gaps in fulfilling the basic supplies in temporary shelters to accommodate the needs and accessibility of vulnerable groups. YEU will provide immediate basic needs for around 10.000 people displaced by the strike of earthquake and tsunami through fulfilling immediate needs for shelter and settlement/Non-food items; water-sanitation and hygiene promotion; health/nutrition; protection/psychosocial support; emergency preparedness/resilience and camp management

PELKESI program will be targeting on around 21.870 people from all age groups in health sector adjust to the capacity for response. Government's healthcare systems which are still collapsed as the result of the earthquake and tsunami has cause the fulfilment of basic needs in health sector as one of the community's post-disaster primary needs. Most healthcare unit's area still unable to operate and some biggest hospital had major physical damage, therefore delaying the handling process for the victims. Two of these hospitals are PELKESI/ICAHS's hospital members, i.e. Woodward Hospital and Samaritan Hospital. Even though physically the Woodward Hospital's building is still standing, however the safety of the building is still questionable. While for Samaritan Hospital, it has ceased to operate due to the unsafe of the hospital building and also because the limited of medical workers and supplies. For healthcare service, PELKESI will provide mobile clinics, aimed to outreach those whose haven't been touch by any healthcare services due to the minimum of available healthcare

services and also due to the collapsed government's healthcare system. There are many churches congregations which are still isolated and untouched by logistic and healthcare aid. These will be one of the targets for mobile clinic services as the catchment areas of hospital intervention.

CWS target areas are Palu, Donggala, Sigi districts with plan to cover 10,000 household with overall goal is to provide relief and recovery assistance to the affected population with following objective: (1) to provide shelter and NFI for 500 affected households, (2) to provide access to water supply, sanitation and hygiene promotion (WASH) for 5,000 affected HH. (3) to provide tools, material and capacity which supports livelihood recovery to 300 most affected micro-entrepreneurs HH, (4) to provide capacity building for staff and partners. Expected result are: (1) 500 HH received shelter kits and NFI kits, (2) 5,000 HH have access to safe water, sanitation facilities and received hygiene information/education, (3) 500 HH have started their livelihood activities (4) staff and partners capacity building workshop done. Activities will include: (1) shelter kits and NFI kits distribution, (2) Water distribution, latrine contractions, waste management, & hygiene promotion/education, (3) livelihood trainings, seeds & tools distribution, (4) staff and partners capacity building workshops.

Due to the lack of logistics and food supplies, many aid trucks were stopped in the middle of the road by survivors, and they plundered the contents due to hungry. So safety aspects should also be considered in the distribution of aid.

Coordination

YEU, CWS and PELKESI will continue its very active participation in the coordination meetings established by national cluster and local authorities. YEU, CWS and PELKESI also will encourage local churches, Jakomkris and local partner to be involved in coordination meetings. Information is also share within the ACT Indonesia Forum.

ACTIF implementation will be in one coordination as a comprehensive program. The activities will be implemented by the medical team in coordination with the local stakeholders, health cadres, village midwives, women's groups, elderly groups and the local authorities.

Core Humanitarian
STANDARDThe ACT Alliance Secretariat's continuous improvement in the application of the Core Humanitarian
Standard is independently verified by HQAI

Monitoring and evaluation

- YEU will be responsible for overall monitoring and evaluation. The overall monitoring plan includes the following components: The project manager will supervise the implantation of activates to ensure achievement of outputs and outcome that will be reported to the emergency coordinator. The emergency coordinators will carry out close monitoring and cross-checking in the field for the progress reported, analysing any gaps and identifying further humanitarian needs.
- PELKESI/ICAHS will be responsible with the monitoring and evaluation in health and nutrition sector. Health coordinator as the person in charge of the health program will be ensuring the achievement of outputs and outcomes through supervision. Supervision will be conducted monthly and will be reported to a project manager and PHC-Advocacy program director. The reports will be analysed and will be cross-checked with the situation in the fields to identify the program's achievements based on the outputs and the outcomes, analyse the gap and recommend the next needs. The recommendation from the program's evaluation will be delivered to the village's government and to the community health centres to be a recommendation for the village's programs in health sector. These monitoring and evaluation will be conducted during the project's period.
- CWS program will be monitored daily by field implementation officers who will then report to Program Officers. The Field and Program Officers conduct program monitoring and reporting based on monitoring framework built for this program. Such framework refers to the overall work plan and implementation matrixes which lay out progress and achievement indicators. Monthly field monitoring will be carried out by Program Officers who will provide monitoring reports to the Program Manager. AN evaluation will be done at the end of the program.
