

Climate Justice Resources

ACT produces climate justice research each year. For updates, visit ACT News regularly and join ACT's Climate Justice mail list (see Information Sheet 2).

ACT Climate Justice Advocacy Framework 2023-26. ACT Alliance

Created through a collaborative process with members from around the world who are part of the Climate Justice Advocacy and Programme groups, with guidance from the Reference Group, this document guides ACT's Climate Justice work until 2026. Available in English and Spanish.

Ideas for Climate Advocacy. 2022. ACT Alliance

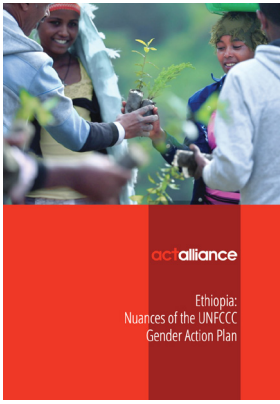

Practical strategies for climate justice, featuring case studies of members. "We must keep hope alive and I think this publication can help us," says Mattias Söderberg, co-chair of the ACT Alliance Climate Justice Reference Group.

Addressing the Protection Gap – Human Mobility and the Climate Crisis. 2023. Bread for the World and ACT Alliance

Those who permanently lose their land or livelihoods should have access to alternative long-term solutions which include socioeconomic rights and preserve their cultural life. Soon to be available in Spanish.

Ethiopia: Nuances of the UNFCCC Gender Action Plan. 2022. ACT Ethiopia Forum

Explores how the Gender Action Plan (GAP) is being implemented by various levels of government, NGOs, ACT members, and INGOs throughout the country. The study was funded by ACT members Act Church of Sweden and Brot fur die Welt.

Post 2025 Climate Finance Architecture – through a climate justice lens

Post 2025 Climate Finance Architecture – through a climate justice lens

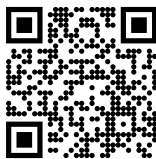

It will help reader's understand climate finance: how it operates; the shortfalls; the opportunities; and the changes required to the architecture to deliver a climate-just post 2025 finance regime.

Part A: Foreword
Climate financing is urgently needed for systemic transitions towards zero-carbon societies. The need to act rapidly to avoid the most damaging impacts of the climate crisis is increasingly clear. From experience we know that developing countries have faced difficulties mobilising and accessing agreed-upon support. For poor and vulnerable communities, the lack of action is threatening. Our future depends on the actions of major polluters around the world.
Advancing climate justice has been the guiding principle of ACT Alliance campaigns for several years. It entails a call for climate finance, and support for mitigation, adaptation, and loss and damage in the Global South.
Negotiations from developing and developed countries should set and implement a new climate finance goal for the post-2025 period. The success of its delivery hinges on a effective process of the USD 100 billion promise, extension and meaningful consultations with all stakeholders and meeting the needs of vulnerable countries in its elaboration. The new and reconfigured financial architecture must enable ease of access to finance for climate action and avoid pushing frontline nations into further debt crises.
It is our ambition that the new goal and its regime will galvanise climate justice action and make it possible for the world's vulnerable and disadvantaged to see above the impacts of climate change.

Video: Climate Adaptation in Zimbabwe. 2021. ACT Alliance

ACT members in Zimbabwe work with communities to help families adapt to the reality of climate change's impacts on their lives and livelihoods. Available with subtitles in Spanish and French as well as English.

Climate change and adaptation strategies in Zimbabwe

Fabo learning site

ACT Platform on Climate Change and Programmes: learn and exchange views on how to build impactful climate change programmes. All ACT members can join the Fabo learning site to access these resources and those of the ACT Advocacy Academy.
